

This practice is built exactly like the real test – same questions, same order, different numbers. Work every problem, then check the worked key. Anything you miss is exactly what to study.

1. Find the sum. Write your answer in standard form: $(5x^3 - 3x^2 + 2x - 7) + (2x^3 + 6x^2 - 9x + 4)$
2. Find the difference. Write your answer in standard form: $(8x^2 - 5x + 3) - (3x^2 + 6x - 9)$
3. Find the product in standard form: $-5x^2(3x^2 - 2x + 6)$
4. Find the product in standard form: $(5x - 2)(2x + 7)$
5. Find the product in standard form: $(x + 5)(x^2 - 4x + 3)$
6. Find the product in standard form: $(4x - 3)^2$

Algebra 1 – Module 10 Practice Test

Full Name: _____

Period: _____

7. Factor out the GCF: $21x^3 - 14x^2 + 35x$

11. Factor: $36x^2 - 121$

8. Factor: $x^2 + 13x + 42$

12. Factor, if possible. If the trinomial cannot be factored, identify it as "PRIME":
 $x^2 + 6x + 11$

9. Factor: $x^2 - 5x - 24$

13. A rectangular mural on the gym wall has an area of $4x^2 + 28x + 40$ square feet. Factor the expression completely to find binomials that could represent the length and width. (Hint: check the GCF first.)

10. Factor: $3x^2 + 11x + 6$
