

This practice is built exactly like the real test – same questions, same order, different numbers. Work every problem, then check the worked key. Anything you miss is exactly what to study.

- 1.** Write and then solve an equation that represents the statement: Fourteen less than six times a number, n , is 64.

2. Solve: $8x + 21 = 93$

3. Solve: $6(2x + 5) - 8 = 46$

4. Solve: $7(x - 2) = 4x + 10$

5. Solve: $(3/5)x + 4 = 22$

6. Solve: $0.8x - 2.4 = 5.6$

- 7.** Solve each equation. If it has no solution or is an identity, say so and explain how you know.

a. $9x - 6 = 9x + 5$

b. $5(2x - 7) = 10x - 35$

Algebra 1 – Module 2 Practice Test

Full Name: _____

Period: _____

- 8.** Solve the literal equation $P = 2a + b$ for a .
- 9.** Solve the literal equation $V = (1/3)\pi r^2 h$ for h .
- 10.** A bowling alley charges a \$4.50 shoe rental plus \$5.25 per game. Talia spends \$30.75 in all. Write and solve an equation to find how many games, g , she bowled.
- 11.** Error Analysis — To solve $5(x + 4) = 45$, Rex first wrote $5x + 4 = 45$. Identify his mistake, then solve it correctly.
- 12.** The sum of three consecutive integers is 111. Find the integers.
- 13.** A rectangle's length is 3 cm more than twice its width, and its perimeter is 78 cm. Write and solve an equation to find the width and the length.

Cumulative Review — ACT Style. Circle the best answer.

- 14.** What is the value of $5x^2 - 8$ when $x = 3$?
- (A) 22
(B) 37
(C) 53
(D) 217
- 15.** Which expression is equivalent to $7(2x - 3) + 5x$?
- (E) $19x - 21$
(F) $19x - 3$
(G) $9x - 21$
(H) $19x + 21$
- 16.** 40% of 85 is what number?
- (A) 30
(B) 34
(C) 45
(D) 51
