

This practice is built exactly like the real test — same questions, same order, different numbers. Work every problem, then check the worked key. Anything you miss is exactly what to study.

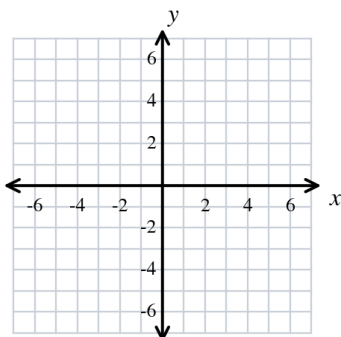

1. Graph the linear equation: $y = 4x - 2$

2. Graph the linear equation: $y = -(3/5)x + 1$

3. Graph the linear equation: $x = 3$

4. Write the equation, in slope-intercept form, of the line with slope 5 and y-intercept -8 .
5. Find the slope of the line passing through $(-1, -5)$ and $(4, 10)$.
6. Find the slope of the line passing through $(-5, -6)$ and $(2, -6)$.
7. A line has a slope of 3 and passes through $(2, y)$ and $(5, 16)$. Find the missing coordinate.

Algebra 1 – Module 4 Practice Test

Full Name: _____

Period: _____

- 8.** Write the equation $5x - 2y = 12$ in slope-intercept form, then identify the slope and y-intercept.

- 9.** For the line $y = (4/3)x - 5$, identify the slope and the y-intercept, and explain what each tells you about the graph.

- 10.** Does the table show a linear relationship? If so, give the constant rate of change.

x	y
0	-2
3	13
6	28
9	43

- 11.** Error Analysis — To graph $y = -5x + 6$, Rex plotted his first point at the point (6, 0). Identify his mistake.

- 12.** The battery charge left on a delivery drone is modeled by $c = -6t + 42$, with c in percent and t in minutes of flight. Interpret the slope and the y-intercept, then find when the model reaches zero.

- 13.** Write the equation, in slope-intercept form, of the line through (0, 7) and (3, -5).

Cumulative Review — ACT Style. Circle the best answer.

- 14.** Which relation is a function?

- (A) $\{(2, 4), (2, 5), (3, 6)\}$
- (B) $\{(8, 1), (8, 2), (9, 3)\}$
- (C) $\{(0, 3), (1, 4), (0, 5)\}$
- (D) $\{(4, 7), (5, 7), (6, 8)\}$

- 15.** Solve: $6(x + 3) = 48$

- (E) 5
- (F) 6
- (G) 8
- (H) 11

- 16.** Solve $A = lw$ for w .

- (A) $w = Al$
- (B) $w = l/A$
- (C) $w = A - l$
- (D) $w = A/l$
