

This practice is built exactly like the real test — same questions, same order, different numbers. Work every problem, then check the worked key. Anything you miss is exactly what to study.

1. Solve the system by graphing. $y = x + 4$
 $y = -2x + 1$

2. Graph the system. What does the graph tell you about its solutions? $y = -2x + 5$
 $4x + 2y = 10$

3. Solve using substitution: $y = x - 4$
 $3x + y = 16$

4. Solve using substitution: $x = 4y + 1$
 $2x + 3y = 24$

5. Solve using elimination: $2x + 3y = 22$
 $3x - 3y = 3$

6. Solve using elimination: $3x + y = 11$
 $4x + 3y = 23$

Algebra 1 – Module 7 Practice Test

Full Name: _____

Period: _____

7. Without graphing, decide how many solutions the system has. Justify. $4x - 2y = 6$ $2x - y = 5$
8. Solve using any method: $y = 7x + 1$
 $y = 3x + 13$
9. Carnations cost \$3 and roses cost \$5. The student council sells 20 flowers for \$76. Write and solve a system to find how many of each were sold.
10. Four candles and three vases cost \$37.00. Four candles and one vase cost \$23.00. Find the price of each item.
11. Error Analysis — Solving $x + 2y = 10$
 $3x + 5y = 28$, Rex added the equations right away and got $4x + 7y = 38$, which still has both variables. What did he forget, and what is the solution?
12. Studio A charges a \$50 registration fee plus \$15 per lesson; Studio B charges a \$20 registration fee plus \$20 per lesson. After how many lessons do they cost the same, and what is that cost?
13. A rectangular flag's length is 5 in. more than twice its width, and its perimeter is 52 in. Write and solve a system to find the dimensions.

Cumulative Review — ACT Style. Circle the best answer.

14. Solve: $7 - 2x < 1$
(A) $x > 3$
(B) $x < 3$
(C) $x > -3$
(D) $x < -3$
15. What slope is perpendicular to $y = (2/3)x - 4$?
(E) $2/3$
(F) $-2/3$
(G) $3/2$
(H) $-3/2$
16. What is the slope of the line $10x - 2y = 8$?
(A) 10
(B) 5
(C) -5
(D) -2
