

Geometry 3.3 — Homework Answers

Odd-numbered exercises. Check your work against these; bring questions on the evens to class.

1. $m \parallel n$ — Corresponding Angles Converse
3. $m \parallel n$ — Alternate Interior Angles Converse
5. No conclusion — $\angle 2$ and $\angle 7$ lie on different lines at different transversals, so they are not one of the four angle pairs.
7. $y = 16$
9. No — the Corresponding Angles Converse guarantees the lines are parallel whenever a pair of corresponding angles is congruent.
