

Paper Practice 1.4**The Distributive Property**

Show all of your work in the space provided. Write each answer in simplest form. Circle your final answers.

- 1.** Use the distributive property to rewrite and evaluate each expression using mental math.
(Mental Math)

a. $7(43)$

b. $9(196)$

c. $6(5 \frac{1}{6})$

- 2.** Use the distributive property to simplify each expression. (Distribute)

a. $3(4x - 9)$

b. $(2y^2 + 5y - 3)4$

c. $-5(2a - 3b + 1)$

- 3.** Simplify, if possible: $15n - 4n$ (Like Terms)

- 4.** Simplify, if possible: $5c^2 + 7c - 2c$ (Like Terms)

- 5.** Simplify, if possible: $x^2 + 9x + 9$ (Like Terms)

- 6.** Simplify: $8d + 3(2d + 7)$ (Simplify)

7. Simplify: $4(3x + 2y) - 3(5 - y)$ (Simplify)

8. Simplify: $2(3m + 7) - (m + 10)$ (Simplify)

9. Write an algebraic expression for "four times the sum of $3x$ and $2y$, decreased by twice the difference of 6 and y ," then simplify it. (Write & Simplify)

10. Write an algebraic expression for "the product of 7 and t squared, increased by 2 times the sum of 3 and t squared," then simplify it. (Write & Simplify)

11. Error Analysis – Gus simplified $-3(2x - 5)$ and wrote $-6x - 15$. Identify his mistake, then simplify correctly. (Error Analysis)

12. A store sells notebooks for \$3 and pens for \$2. Write an expression for the cost of n notebooks and p pens for each of 4 students, then simplify and evaluate it for $n = 3$ and $p = 5$. (Apply)
