

Name: _____

Find each geometric mean.

1. 6 and 24
2. 3 and 27
3. 10 and 40

The altitude to the hypotenuse splits it into the two given segments.

4. Segments 2 and 8: find the altitude.
5. Segments 9 and 16: find the altitude AND both legs (hypotenuse = 25).
6. Segments 6 and 12: find the altitude in simplest radical form.

Use the leg rule.

7. Hypotenuse 25, segment adjacent to the leg 9: find the leg.
8. Hypotenuse 13, adjacent segment 4: find the leg in simplest radical form.
9. Hypotenuse 18, adjacent segment 6: find the leg in simplest radical form.
10. The altitude is 10 and one segment is 5. Find the other segment and the hypotenuse.
