

Warm Up:

1. Simplify: $5(2x + 3) - 4x$
2. Evaluate: $|3 - 5x|$, if $x = 2$
3. Round 4.267 to the nearest hundredth.
4. A car travels 260 miles on 8 gallons. Find the miles per gallon.
5. A team scored 1848 points over 22 games. Find the points per game.

1.5 Homework Questions?

Speak Like A Mathematician:

descriptive modeling:

metric:

accuracy:

Example 1: Descriptive Modeling

- A school store tracks hoodie sales for five months: 42, 55, 38, 61, and 49 hoodies. Describe two different mathematical models the store could use to summarize these sales, and state what each one tells you.

- Which model would be most useful for deciding how many hoodies to order next month? Explain.

Example 2: Compare Metrics

- Two players' season statistics are shown. Use two different metrics to decide who had the better season.

Player	Points	Games
Alvarez	1,848	22
Brooks	1,530	17

Example 3: Choose a Metric

- A principal wants to identify the “most improved” class on a state exam. Class A rose from 62 to 74. Class B rose from 80 to 88. Which class improved more? Defend your choice with a metric.

Example 4: Accuracy

- A digital thermometer reads 98.5°F when the true temperature is 98.6°F . Find the accuracy of the reading.
- A bag of flour is labeled 5 pounds. A scale shows 4.92 pounds. Find the accuracy, and express it as a percent of the labeled weight.

Tonight's Homework:
