Same Line, Three Ways

Module 5.1–5.2 Writing Linear Equations

REVIEW DAY 2

> *These 24 cards are really only **8 lines** — each one written in slope-intercept, point-slope and standard form. Cut them apart and rebuild the 8 sets of three. You cannot do this by matching numbers; you have to convert.*

$x + y = 7$	$x - 2y = -6$	$y = -3x + 7$
$y - 3 = 2(x - 1)$	$2x - y = -1$	$y - 1 = -3(x - 2)$
$y + 4 = 5(x - 0)$	$y = \frac{3}{4}(x + 4)$	$y + 2 = 4(x + 1)$
$3x - 4y = -12$	$y - 5 = \frac{1}{2}(x - 4)$	$4x - y = -2$
$y + 1 = -\frac{2}{3}(x - 3)$	$2x + 3y = 3$	$y = \frac{1}{2}x + 3$
$y = 2x + 1$	$y = \frac{3}{4}x + 3$	$y = -x + 7$
$3x + y = 7$	$y = 4x + 2$	$y - 2 = -(x - 5)$
$y = -\frac{2}{3}x + 1$	$5x - y = 4$	$y = 5x - 4$

Same Line, Three Ways

Module 5.1–5.2 Writing Linear Equations

REVIEW DAY 2

Name _____ Period _____

> *Record each group once you are sure of it. The last line is the check: read the slope straight off the point-slope card, and the point it was built from.*

Group 1 — slope-intercept

point-slope

standard

slope / a point on the line

Group 2 — slope-intercept

point-slope

standard

slope / a point on the line

Group 3 — slope-intercept

point-slope

standard

slope / a point on the line

Group 4 — slope-intercept

point-slope

standard

slope / a point on the line

Group 5 — slope-intercept

point-slope

standard

slope / a point on the line

Group 6 — slope-intercept

point-slope

standard

slope / a point on the line

Group 7 — slope-intercept

point-slope

standard

slope / a point on the line

Group 8 — slope-intercept

point-slope

standard

slope / a point on the line
