Find the Error

Module 5.1–5.2 Writing Linear Equations

REVIEW DAY 3

Name _____ Period _____

> *Every solution below is wrong, and every one of these is a mistake real students make on this material. Say what went wrong in your own words, then write the correct answer.*

1. Write an equation in point-slope form through (−3, 5) with slope 2.

$y - y_1 = m(x - x_1)$

$y - 5 = 2(x - 3)$

What went wrong?

Correct answer:

2. Write an equation in slope-intercept form through (6, 1), perpendicular to $y = \frac{2}{3}x + 1$.

$m = \frac{3}{2}$

$1 = \frac{3}{2}(6) + b \rightarrow 1 = 9 + b$

$b = -8$

$y = \frac{3}{2}x - 8$

What went wrong?

Correct answer:

3. Write $y = 3x - 4$ in standard form.

$-3x + y = -4$

What went wrong?

Correct answer:

4. Write an equation in slope-intercept form through (1, 2), parallel to $y = -4x + 1$.

$m = \frac{1}{4}$

$2 = \frac{1}{4}(1) + b$

$b = \frac{7}{4}$

$y = \frac{1}{4}x + \frac{7}{4}$

What went wrong?

Correct answer:

5. Write $y = \frac{1}{2}x - 3$ in standard form.

$\frac{1}{2}x - y = 3$

What went wrong?

Correct answer:

6. Write an equation in slope-intercept form through (3, −2), parallel to $y = 2x + 5$.

Parallel → $m = 2$

$y = 2x + 5$

What went wrong?

Correct answer:

Exit Ticket — Writing Linear Equations

Name _____ Period _____

1. Write an equation in **slope-intercept form** through (−2, 3) with slope 4.

2. Write an equation in **point-slope form** through (1, 4) and (5, 12).

3. Write $y = \frac{2}{5}x + 3$ in **standard form**.

4. Write an equation in **slope-intercept form** through (3, −2), parallel to $y = -\frac{1}{3}x + 4$.

5. Write an equation in **slope-intercept form** through (−4, 5), perpendicular to $y = 2x - 1$.
