

Speak Like A Mathematician:

similar polygons ($\sim$):

scale factor:

similarity statement:

Similar Polygons

Two polygons are similar if and only if corresponding angles are _____ and corresponding sides are _____.

Perimeters of Similar Polygons: the ratio of the perimeters equals the ratio of corresponding _____ (the scale factor).

Example 1 - Read a Similar Pair

In the figure at the top right, $\triangle JKL \sim \triangle PQR$.

- Name the three pairs of congruent angles.
- Write the three equal side ratios.
- State the scale factor of $\triangle JKL$ to $\triangle PQR$.

Example 2 - Are They Similar?

Quadrilaterals ABCD and WXYZ at the right have congruent corresponding angles. $AB = 12$, $BC = 16$, $CD = 20$, $DA = 24$, $WX = 9$, $XY = 12$, $YZ = 15$, $ZW = 18$.

- Check all four side ratios.
- Write the similarity statement and scale factor.

Example 3 - Similar or Not?

- The rectangles at the right measure 8×6 and 12×9 . Similar? Explain.
- The triangles at the right have angles 70° , 60° and 70° , 55° . Similar? Explain.
- A classmate says ALL rectangles are similar. Correct?

Example 4 - Solve for x

In the figure at the right, $\triangle DEF \sim \triangle MNP$, $DF = 14$, $MP = 21$, $EF = x + 4$, and $NP = 27$.

- What is the scale factor of $\triangle DEF$ to $\triangle MNP$?
- Write and solve the proportion for x.

Example 5 - Quadrilateral Scale Factor

In the figure at the right, $ABCD \sim QRST$, $AB = 16$, $QR = 12$, $CD = 20$, and $ST = 3x$.

- Find the scale factor of $QRST$ to $ABCD$.
- Find x.

Example 6 - Perimeters of Similar Figures

A school prints a banner similar to a 36 in. $\times$ 24 in. poster. The banner is 90 in. long.

- Find the scale factor of the banner to the poster.
- Find the banner's width.
- Find both perimeters and check the ratio.
