

Name: \_\_\_\_\_

**Solve each right triangle. Round decimals to the nearest tenth.**

1. Legs 8 and 15.
2. Hypotenuse 30, one leg 18.
3. A  $41^\circ$  angle and hypotenuse 24.
4. A  $63^\circ$  angle whose adjacent leg is 11.

**Find the indicated angle. Round to the nearest tenth.**

5. The angle whose opposite leg is 19 and adjacent leg is 28.
6. The angle whose adjacent leg is 14 and hypotenuse is 23.

**Choose your tool.**

7. You know two sides of a right triangle and want an ANGLE.  
Which family of ratios do you use?
8. You know one acute angle and one side and want another  
SIDE. Which family?
9. After finding one acute angle, what is the fastest way to the  
other?
10. List the minimum information needed to solve a right  
triangle (besides the right angle).
